

RVPF – Context Model	author: olaf.erler@hshl.de	V0.1 21-07-26
----------------------	--	---------------

Definition: A context describes the semantic meaning of one or More StudioObjects, which arises from the interpretation of one or more impulses. Contexts form the basis for the generation of events.

Context Class	Beispiele
Spatial Context	ActorInsideStage, CameraNearActor
Temporal Context	RecordRunning, CountdownExpired
System Context	CameraConnected, TrackingAvailable
User Context	PresenterActive, OperatorLoggedIn
Environment Context	StudioOccupied, DoorOpen
Interaction Context	ButtonHeld, SliderMoved
Relationship Context	CameraObservesActor, RoverControlsTorch, ActorAssignedToCamera
