--------------	--	---------------

Term	Definition
StudioObject	The central semantic unit of the RVPF. A StudioObject represents a physical or virtual component of the studio and has roles, Core capabilities, states, and components.
Unreal Asset	Short for “asset.” A resource in Unreal Engine (e.g., Blueprint, Material, Mesh, Sound, or Animation) that is used To create or support a StudioObject.
Impuls	An impulse is any piece of information that occurs over time and can influence the behavior of a StudioObject or the framework. An impulse initially has no specific meaning. This meaning arises only through context and interpretation within the RVPF.
Context	Description of the current production situation that could serve as a catalyst
State	the current value of a context element
Event	Semantic Description of a Transition
Transition	Change in a state
Command	A command to an object to perform an action
